Contents

NO 1 JANUARY 1974

LETTERS TO THE EDITOR

Positron annihilation gamma ray lineshapes in metals
T E Jackman, C W Schulte, J L Campbell, P C Lichtenberger, I K Mackenzie and M R Wormald L1
Some electrical properties of cobalt films *P Whyman and R V Aldridge* L6

PAPERS

The effect of a long range oscillatory interaction on the stability of alloys *C S G Cousins* 1
Crystal dynamics of some cubic metals on an angular force model *S Jogi* 11
Third order perturbation theory and lattice dynamics of simple metals
C M Bertoni, V Bortolani, C Calandra and F Nizzoli 19
Quantum oscillations in ultrasonic absorption and the Fermi surface of indium
J E Cowey, R Gerber and L Mackinnon 39
The band structure of the group 5A alloys: magnetoreflection experiments *M J Apps* 47
The electrical transport properties of platinum at room temperature *T Dosdale and D Livesey* 68
Are the scaling laws for the Kondo problem exact? *J Sólyon and A Zawadowski* 80
Deviations from Matthiessen's rule in Li : Mg *F Kus and J P Carbotte* 91
The transport properties of dilute copper–chromium alloys in magnetic fields
M Read and A M Guénault 94
A calculation of the electrical conductivity of thin films of potassium and sodium
A Heiman and V Halpern 107
Superconductivity in transition metal alloys: an alternative to the rigid band model II
A R Miedema 120
Achievement of very high critical currents in type II superconductors
W E Timms and M A R LeBlanc 136
A self coupled travelling wave model for superconducting tunnel junctions *L E Hasselberg* 154
X ray study of line shifts and band spectra in the alloys TiNi, TiCo and TiFe *E Källne* 167
Oxidation effects on the spectrum of the slow SEE peak in polycrystalline Mg
B Wright and E B Pattinson 176

NO 2 FEBRUARY 1974

LETTERS TO THE EDITOR

Chemical potentials and fluctuations in liquid sodium–cesium alloys
K Ichikawa and J C Thompson L9
Calculation of the electronic thermal conductivity of superconducting alloys with local states within the gap *B Leon and A D Singh Nagi* L13
A model for Kondo type intermetallic compounds with small effective moments
G Grüner and N F Mott L16
Kondo effect in structurally disordered single element magnetic materials
P K Leung, J Slechta and J G Wright L21
^{57}Fe Mössbauer spectra in splat quenched Al–0·5, 1, 3 and 5 at% Fe alloys
S Nasu, U Gonser, P H Shingu and Y Murakami L24

PAPERS

Lattice statics calculations for interstitial atoms in tungsten *R Benedek and P S Ho* 183
Order–disorder critical phenomena in FeCo *J Orehotsky and K Schröder* 196

Influence of local fluctuations of concentration on the electronic density of states in disordered binary alloys — *P Aigrain, D Calecki and N Pottier* 202
Order–disorder transition in a model binary alloy — *F Brouers, J Giner and J Van der Rest* 214
Electrical resistivity of the AuV system — *P J Ford, T E Whall and J W Loram* 225
The T^2 electrical resistivity in nickel and palladium alloys — *D Greig and J A Rowlands* 232
The magnetoresistance of aluminium using electrodeless methods — *J A Delaney* 247
Thermoelectric power of homovalent copper alloys — *A M Guénault* 256
The high energy density of states in a superconducting thin film in the mixed state — *R F Saffin and R J Watts-Tobin* 268
The reversible susceptibilities of dysprosium and terbium — *A del Moral and E W Lee* 280
On the effects of spin–orbit coupling on impurity atoms in cubic ferromagnetic alloys — *G A Gehring and H C W L Williams* 291
Electron spin resonance of Gd($4f^7$) in Pd — *R H Taylor and B R Coles* 303
The hyperfine interaction of holmium in ferromagnetic rare earth alloys — *I S Mackenzie, M A H McCausland and A R Wagg* 315
Mössbauer spectra of invar alloys — *B Window* 329
X ray photoelectron studies of thorium and uranium — *J C Fuggle, A F Burr, L M Watson, D J Fabian and W Lang* 335

NO 3 MARCH 1974

LETTERS TO THE EDITOR

Pressure equation of state of liquid metals — *M Watabe and W H Young* L29
The temperature dependent resistivity of dilute copper alloys — *T Dosdale and G J Morgan* L32
Resistivity of Kondo alloys below T_K — *B Kozarzewski* L35
Theory of lattice contraction at aluminium surfaces — *M W Finnis and V Heine* L37
Effect of lattice anharmonicity on superconductivity — *J C K Hui and P B Allen* L42
The Kondo effect and the highly correlated gas — *N F Mott* L46
Functional integral transformation of the Anderson model into the s–d exchange model — *G Morandi and D Sherrington* L51
Magnetic entropy of $ZrZn_2$ — *R Viswanathan* L57
A CW NMR study of the hyperfine field perturbations at Fe sites in Fe rich FeCr alloys — *E F Mendis* L59
Quadrupolar Hamiltonian on Ir nuclei in dilute alloys of nickel — *C Demangeat* L64
Optical absorption spectra of surface plasmons in small copper particles — *G C Papavassiliou and Th Kokkinakis* L67

PAPERS

Vacancy–silicon binding energy in aluminium by positron annihilation — *S M Kim, W J L Buyers, P Martel and G M Hood* 343
On the vacancy formation energy and volume of simple cubic metals — *Z D Popovic, J P Carbotte and G R Piercy* 351
Relativistic effective Hamiltonian for calculation of electron energy bands — *C F Osborne, G C Fletcher and R Miller* 361
The volume dependence of the electron–phonon mass enhancement and the pressure dependence of T_c in transition metals — *V K Ratti, R Evans and B L Gyorffy* 371
Calculation of the band structure, Fermi surface, and interband optical conductivity of lithium — *J P Peredew and S H Vosko* 380
Crystal potentials and APW and KKRZ pseudopotentials *A Meyer, W H Young and M A C Devillers* 394
The temperature dependent resistivity of dilute aluminium alloys — *T Dodsale and G J Morgan* 402
Spin fluctuation effects in ruthenium alloys — *F C C Kao and G Williams* 419
On the thermal conductivity of dilute alloys at low temperatures — *D Schotte and U Schotte* 429
Shape effects on the magnetization of superconducting lead at 4·2 K — *J Provost, E Paumier and A Fortini* 439
Structure in superconducting aluminium tunnel junction characteristics at $eV = 4\Delta$ — *W Day* 449
Magnetism and resistivity of some dilute rare earth–zinc compounds — *A M Stewart and B R Coles* 458
A group theoretical study of selection rules for magnon–phonon interactions in ferromagnetic hcp metals — *A P Cracknell* 466

NMR study and magnetic properties of vanadium based alloys with transition metals *P Panissod* 484
X ray photoelectron studies of oxygen adsorption on niobium metal *M K Bahl* 497

NO 4 APRIL 1974

LETTERS TO THE EDITOR

On the anomalous surface structures of gold and platinum *G E Rhead* L53
Concentration fluctuations and the cluster model in liquid binary alloys *R Turner* L57
The interaction between an impurity atom and a vacancy in aluminium *R Yamamoto, O Takai and M Doyama* L61
The radio frequency size effect in tungsten *R S Thompson and A Myers* L64
Resistivity and thermoelectric power of liquid caesium under pressure *V K Ratti and A Jain* L69
Electrical resistivity of concentrated AuCr alloys *P J Ford, E Babić and J A Mydosh* L75
Giant moment in nickel solid solutions *A Amamou and B Loegel* L79

PAPERS

Spontaneous alloying of a gold substrate with lead monolayers *J P Biberian and G E Rhead* 675
The optical absorption in partially disordered silver films *O Hunderi and H P Myers* 683
Electromigration in thin gold films *B J Klein* 691
Giant moments in iron doped Ni_3Al *P C Ling and T J Hicks* 697
On a relation between the monovacancy formation energy and the Debye temperature for metals *V K Tewary* 704
Dielectric screening and phonon dispersion in hcp zinc: a pseudopotential approach *R P Bajpai* 709
Quantum oscillations in the thermal transport properties of tin *R C Young* 721
Electronic structure of cobalt *R A Ballinger and C A W Marshall* 735
Cluster calculations of the soft x ray L_3 emission spectra of nickel and copper *D House, P V Smith and B L Gyorffy* 745
Further cluster calculations of the electronic spectra of transition metals *D House and P V Smith* 753
The optimized model potential for thirty-three elements *M Appapillai and A R Williams* 759
Applications of the optimized model potential *A R Williams and M Appapillai* 772
Some comments on the importance of third order contributions to the screening of the ionic potential and to the structural energy of metals *A R Williams* 781
On the band structure of transition metals *J Friedel* 785
Spin density wave and soft phonon mode from nesting Fermi surfaces *S K Chan and V Heine* 795
Two current conduction in ferromagnetic transition metal alloys: Sn in Fe, Co and Ni *D C Price and G Williams* 810
Temperature dependence of the resistivity in localized spin fluctuations and in Kondo systems: an experimental comparison *C Rizzuto, E Babić and A M Stewart* 825
Magnetic interactions at ^{57}Fe nuclei in nickel, palladium and platinum alloys *G Longworth and B Window* 832
Physical properties given by the magnetic Hartree–Fock solution of Anderson's model *A M Stewart and G Grüner* 843
The magnetoresistance of gold–iron alloys in high fields *R Berman and J Kopp* 847
Spin–orbit interactions in dilute magnetic alloys. I: Induced spin anisotropy and its effect on the electrical resistance *D A Smith and G P Haberkern* 856
^{63}Cu spin lattice relaxation in CuMn: nuclear spin diffusion *P Bernier and H Alloul* 869
Mössbauer studies of $R(FeCo)_2$ Laves phases *A P Guimarães and D St P Bunbury* 885
NMR measurements of the speed of vortices in flux flow in a type II superconductor *J-M Delrieu* 893

NO 5 MAY 1974

LETTERS TO THE EDITOR

On some three dimensional dislocation problems in anisotropic media *R J Asaro and D M Barnett* L103

A first principles generalized pseudopotential calculation for the phonon spectra of zinc
J Panitz, P H Cutler and W F King III L106
The structure of noncrystalline films of some transition and noble metals
P J Grundy and L B Davies L111
Comment on 'Transport properties of dilute copper–chromium alloys in magnetic fields'
I M Templeton L115
Effect of pressure on impurity–impurity interactions in a dilute Au(Fe) alloy
J S Schilling, J Crone, P J Ford, S Methfessel and J A Mydosh L116
Magnetoresistivity of dilute magnetic alloys *G S Poo* L121
Polarization analysis of neutron scattering from PdMn 10 at % alloy *N Ahmed and T J Hicks* L124

PAPERS

On the modified Bhatia's model for the lattice dynamics of transition (hcp) metals *S S Kushwaha* 663
Consideration of the existence of surface wave (Rayleigh wave) solutions in anisotropic elastic crystals *D M Barnett and J Lothe* 671
Electronic density of states for liquid metals and alloys in the tight binding approximation
B Movaghar, D E Miller and K H Bennemann 687
Scattering from impurities in silver and gold alloys *R Harris and B G Mulimani* 703
The Fermi surface of mercury from an APW interpolation *M A C Devillers and A R de Vroomen* 711
Electronic transport in substitutionally disordered alloys *R S Tripathi, M P Das and S K Joshi* 717
Low temperature thermoelectric power of dilute Al 3d alloys *V Zlatić and N Rivier* 732
Surface impedance of high purity metals in a weak magnetic field *R A Young and J Chelikowsky* 739
Magnetic field dependence of the surface reactance of superconducting tin at 174 MHz
B D Josephson 751
Ferromagnet or spin glass? Magnetic ordering in Au–Fe alloys *A P Murani* 757
The specific heat of magnetic Au_2Mn *P Wells* 767
Pseudopotential calculations on the optical properties of palladium *C Y Fong* 775
Comparison of the optical properties of V, Cr and Mn with nondirect translations *M R Steel* 783
Comparison between positron and electron emission from aluminium in the keV region
L Braicovich, A Fasana and G Gambarini 792
Absorption and surface alloying of lead monolayers on (111) and (110) faces of gold
J Perdereau, J P Biberian and G E Rhead 798

NO 6 JUNE 1974

LETTERS TO THE EDITOR

Backscattering in dilute silver alloys *N A W Holzwarth, M J G Lee and P T Coleridge* L129
Compton profiles of the alloys TiNi, Ti_2Ni and $TiNi_3$ *T Paakkari and S Manninen* L133
The t matrix pole and resonant impurity states in alloys *D Jacobi and M J Zuckermann* L136
Concentration dependence of electrical transport coefficients in conformal liquid metal alloys
M Parrinello, N H March and M P Tosi L142
Electron tunnelling study of the superconducting high pressure phase of Bi
P Nédellec, L Dumoulin and R J Noer L145
Auger rates for soft x ray transitions in ionic, atomic and metallic lithium
D R Franceschetti and J D Dow L151
Characteristic energy losses in zinc and cadmium *P J K Paterson and R C G Leckey* L156
Resistance minima in (V–Cr)Fe alloys *R L Rusby and B R Coles* L161

PAPERS

A calculation of the Coulomb correlation energy, U, for transition metals in Hubbard's model
B N Cox, M A Coulthard and P Lloyd 807
Positron annihilation in the liquid alkali metals *G Mori* 821
An investigation of positron trapping in indium *V H C Crisp, D G Lock and R N West* 830
Hall effect measurements in aluminium alloys *J M Bradley and J Stringer* 839
Pair description of thermoelectric power in dilute magnetic alloys *K Matho and M T Beal-Monod* 848
^{63}Cu spin lattice relaxation in Cu–Mn and Cu–Cr: electron spin dynamics *H Alloul and P Bernier* 870
Magnetic susceptibilities and nuclear magnetic resonance measurements in $(V_{1-x}Cr_x)Be_{12}$ alloys
S Domngang and R Jesser 890

Magnetic studies of oxidized impurities in pure copper using a SQUID system
F R Fickett and D B Sullivan 900
Charge and spin density in the iron borides *R S Perkins and P J Brown* 906
Mössbauer effect investigation of Y–Fe compounds
P C M Gubbens, J H F Van Apeldoorn, A M van der Kraan and K H J Buschow 921
Effect of disorder on the optical properties of Au, Ag and Au_xAg_{1-x}
F Brouers, M Brauwers and J Rivory 928
X ray spectroscopic study of 4f heavy rare earth metals
B D Padalia, S N Gupta, V P Vijayavargiya and B C Tripathi 938
K absorption edge of zirconium in some of its compounds *M K Gupta and A K Nigam* 947

NO 7 JULY 1974

LETTERS TO THE EDITOR

A simple model for the frequency dependent conductivity of the Kondo system *M Ahmed* L167
A thermodynamical account of the photoemission spectra of the rare earths *B Johansson* L169

PAPERS

The equation of state and the temperature variation of the second order elastic constants of sodium and potassium *R Srinivasan and K S Girirajan* 951
A simple theory of some phase transitions *M W Finnis and V Heine* 960
The theory of distorted structures in the Cd–Mg and In–Tl alloy systems *M W Finnis* 969
Studies of conduction electron scattering in copper using the de Haas–van Alphen effect
R G Poulsen, D L Randles and M Springford 981
Electronic properties of small silver particles: the optical constants and their temperature dependence *U Kreibig* 999
Electrical and thermal resistivities of alkali metals *J Prakash and M P Hemkar* 1015
Low field Hall coefficients of potassium *A Hasegawa* 1024
On the magnetic susceptibilities in disordered alloys I: single band model
M Nauciel-Bloch and R Riedinger 1032
Interactions between transitional impurities in noble (or transition) metal based alloys
J C Parlebas and F Gautier 1044
Anisotropic exchange interaction in the conical magnetic phase of erbium *J Jensen* 1065
A Mössbauer study of iron precipitates in CuFe alloys *S J Campbell and P E Clark* 1073
X ray K absorption edge of copper in some of its compounds *A K Nigam and M K Gupta* 1084
The optical absorption of evaporated beryllium films *O Hunderi and H P Myers* 1088
Corrigenda 1094

NO 8 AUGUST 1974

LETTERS TO THE EDITOR

The density of states of liquid copper *G P Williams and C Norris* L175
On the location of unoccupied 4f states in rare earth metals *B D Padalia and D J Fabian* L179
Strong and weak ferromagnetism in Ni–Fe alloys *I A Campbell* L181
Multiparticle origin of radiofrequency echoes in metallic powders
Z A Pacult, P C Reidi and D P Tunstall L184

PAPERS

Ferromagnetic aftereffect due to interstitials in electron irradiated nickel
H Knöll, U Dedek and W Schilling 1095
Angular forces and normal vibrations in alkali metals *J Prakash, L P Pathak and M P Hemkar* 1107
A new approach to strong correlations in the Hubbard model *H Capellmann* 1112
General expansions for a geometrical plane wave parametrization scheme for the Fermi surfaces of bcc, fcc and hcp metals *K K Chia, A P Cracknell and R J Walker* 1121

Electronic structure studies of solids: IV. Physical quantities from rigorous Hartree–Fock results for lithium crystals — *L Kumar and H J Monkhorst* 1135
Electronic density of states of disordered systems from information about local surroundings–MCPN approximations — *J Slechta* 1148
The influence of phonon conductivity on the thermal magnetoresistivity tensor of metals — *R Fletcher* 1155
Electrical and magnetic properties of Au–Ni alloys — *J R Clinton, E H Tyler and H L Luo* 1162
The surface energy of a bounded electron gas — *J Harris and R O Jones* 1170
Magnetic and superconducting properties of the system $Mo_{77}Ir_{23-x}Fe_x$ — *Ø Fischer, A Treyvaud, G Bongi, H Jones and R Flükiger* 1187
A simple theory of the electron–phonon mass enhancement in transition metal compounds — *I R Gomersall and B L Gyorffy* 1204
Vortex motion in superconductors I — *O L de Lange* 1222
The dependence of the noise voltage associated with flux motion in superconductors on the arrangement of potential leads — *P Jarvis and J G Park* 1238
Magnetic and NMR studies of the CsCl type compounds $GdMg_{1-x}Zn_x$ — *K H J Buschow and A Oppelt* 1246
The spin susceptibility of liquid transition metal alloys — *R Bass* 1256
The low temperature resistivity of RhFe — *R L Rusby* 1265
Itinerant ferromagnetism and susceptibility of nickel–platinum alloys — *J Beille, D Bloch and M J Besnus* 1275
Model of the antiferromagnetic–antiferromagnetic transition in Mn_3Pt alloys — *J A Ricodeau* 1285
The role of harmonics in the first order antiferromagnetic to paramagnetic transition in chromium — *C Y Young and J B Sokoloff* 1304
Single crystal studies of electric field gradients in dilute alloys: III. Non transition metal impurities in aluminium and copper — *R Nevald, B L Jensen and P B Fynbo* 1320

NO 9 SEPTEMBER 1974

LETTERS TO THE EDITOR

The choice of basic seed cluster in structural models of amorphous transition elements — *J G Wright* L187
Hard sphere results and atomic transport properties of liquid metals — *J J van Loef* L190
Stationary and moving charge densities in nearly free electron metals — *M A Ball* L196
Lattice parameters of lithium–magnesium and lithium–silver alloys — *L D Firth, N H A Nowaira and W Scott* L200
On the absence of the finite conduction polarization in dilute alloys — *A Zawadowski and G Grüner* L202

PAPERS

The theory of electron diffraction by the void lattice — *A M Stoneham* 1335
Virtual bound states in dilute transition metal and noble metal based disordered alloys — *C L Cook and P V Smith* 1344
The theory of disordered alloys: II. Continued fractions and cluster theory — *R L Jacobs* 1351
Electronic and optical properties of metallic tin — *M A E A Ament and A R de Vroomen* 1359
Connection between dephasing of the de Haas–van Alphen effect and scattering of electrons — *B R Watts* 1371
Validity of de Haas–van Alphen dephasing calculations — *B R Watts* 1387
Electronic structure of noble (or transition) metal based alloys: charge oscillations, Knight shifts and pair interaction energies — *J C Parlebas* 1392
On the magnetic and electrical properties of nearly equiatomic ordered FeRh alloys — *C J Schinkel, R Hartog and F H A M Hochstenbach* 1412
Superconductivity and stability of near equiatomic V–Ru compounds at high pressure — *T F Smith, R N Shelton, A C Lawson and C W Chu* 1423
Renormalization of the expression for the superconducting tunnelling currents — *L E Hasselberg* 1433
d Resonance effects associated with rare earths and dilute rare earth alloys — *R Devine* 1447
Magnetic properties and electronic structure of rare earth–transition metal intermetallic compounds — *A A Gomes and A P Guimarães* 1454
Ferromagnetism and strong correlations in metals — *H Capellmann* 1466

Interaction of spin fluctuations in ferromagnetic and nearly ferromagnetic itinerant systems — *A Kawabata* 1477
The thermoelectric power of AlMn alloys — *J R Cooper, Z Vučić and E Babić* 1489
Host NMR in dilute magnetic alloys: the spatial variation of the spin polarization — *H Alloul* 1501
Magnetic properties of NdZn — *K H J Buschow, B van Laar and J B A A Elemans* 1517
Electric quadrupole intermediate state perturbations in nuclear orientation with particular reference to Bi isotopes in Fe and Ni — *P D Johnston and N J Stone* 1522
The effect that finite lattice spacing has upon the ESR Bloch equations — *S E Barnes* 1535
Simple analytic model for the hyperfine contact density in a metal — *J P Perdew* 1552
Nuclear quadrupolar relaxation in liquid metals — *C A Sholl* 1556

NO 10 OCTOBER 1974

LETTERS TO THE EDITOR

Crystalline effects in the theory of lattice contraction at metal surfaces — *G P Alldredge and L Kleinman* L207
Surface diffusion of atom clusters — *W R Graham and G Ehrlich* L212
The anomalous ^{27}Al NMR second moment in metallic aluminium — *E R Andrew, W S Hinshaw and R S Tiffen* L215
On the x ray edge anomalies in Li — *B Bergersen, P Jena and T McMullen* L219
The 4f states in lanthanum — *J M Mariot and R C Karnatak* L223

PAPERS

Investigation of Frenkel defects in electron irradiation copper by Huang scattering of x rays: I. Results for single interstitials — *P Ehrhart and U Schlagheck* 1575
Investigation of Frenkel defects in electron irradiated copper by Huang scattering of x rays II. Thermal annealing — *P Ehrhart and U Schlagheck* 1589
Lattice statics of close packed hexagonal metals: vacancy in magnesium — *Z D Popović and J P Carbotte* 1599
X ray line broadening study of splat cooled aluminium and aluminium–tin and aluminium–nickel solid solutions — *A Kirin and A Bonefačić* 1608
An image force theorem for dislocations in anisotropic bicrystals — *D M Barnett and J Lothe* 1618
Self energy and interaction of jogs — *A Golebiewska-Lasota* 1636
The energy and elastic constants of simple metals in terms of pairwise interactions — *M W Finnis* 1645
Band modes of hydrogen in Pd–10AgH and Pd–20AgH by inelastic neutron scattering — *M R Chowdhury* 1657
Anisotropic relaxation times for impurity scattering on the Fermi surface — *R S Sorbello* 1665
Electron density in metals — *V K Ratti and J M Ziman* 1684
Thermodynamic calculations for liquid alloys with an application to sodium–potassium — *I H Umar, A Meyer, M Watabe and W H Young* 1691
Radio frequency size effect measurements in cadmium and zinc — *A Myers, R S Thompson and Z Ali* 1707
Umklapp electron–phonon scattering anisotropy and deviations from Matthiessen's rule — *P N Trofimenkoff and A B Bhatia* 1719
The specific heat of high purity gadolinium between 1·5 and 14 K — *P Wells, P C Lanchester, D W Jones and R G Jordan* 1729
Frequency dependent conductivity of pure simple metals — *W Jones* 1736
Normal modes and the RPA correlation energy of a metallic film — *A Griffin, H Kranz and J Harris* 1744
Effects of anisotropic exchange and magnetoelastic coupling on magnetic phase transitions in holmium and erbium — *B W Southern and D Sherrington* 1755
Critical concentration for the onset of ferromagnetism in Pd–Ni alloys — *A P Murani, A Tari and B R Coles* 1769
Theory of the magnetic susceptibility of liquid Ce–Ni alloys — *M Avignon and L M Falicov* 1782
Effect of carbon dilution on the low temperature thermal and magnetic properties of fcc nickel base alloys — *R Caudron, J J Meunier and P Costa* 1791
A model for induced moment ferromagnetism in some praseodymium–transition metal compounds — *M J Zuckermann* 1800

The low temperature magnetization of ferromagnetic metals *H Yamada* 1819
Anomalous effects in the sputtered atom ejection pattern. *R J MacDonald and I Reid* 1832

NO 11 NOVEMBER 1974

LETTERS TO THE EDITOR

Influence of the core conditions on the nonlinear anisotropic elastic field of a straight dislocation *C Teodosiu* L225
Positron diffusion and trapping at vacancies *C H Hodges* L230
Electrical and optical properties of mercury at low densities *M A C Devillers* L236
Electrical resistivity of Pt–Mn alloys *B V B Sarkissian and R H Taylor* L243
Resistance minimum in spin glasses *N Rivier* L249
Ultraviolet photoelectron study of Ag–Au alloys *A D McLachlan, J Liesegang, R C G Leckey and J G Jenkin* L253

PAPERS

The Born–Green equation for liquid metals *R Kumaravadivel, R Evans and D A Greenwood* 1839
Comment on the application of the absorption sum rule to the optical properties of liquid metals *A N Bloch and S A Rice* 1849
Monte Carlo simulation of the order–disorder transition on the lattice model of the gold modified β brass *J Mościński and Z Rycerz* 1853
The structure of twin boundaries in body centred cubic metals *P D Bristowe, A G Crocker and M J Norgett* 1859
Stacking fault energies of Be, Mg, Al, Cu, Ag, and Au *J F Devlin* 1865
The Z_1 oscillations in stopping power of metals for low velocity channelled heavy ions *A P Pathak* 1883
The morphology of planar vacancy aggregates in copper *E J Savino and R C Perrin* 1889
A neutron measurement of the effect of a magnetic field on phonon lifetimes in niobium *R Pynn and J D Axe* 1898
An investigation of the Debye–Waller factor and Debye temperature of aluminium using nearest neighbour central force pair interactions *R C G Killean* 1908
Low temperature specific heat of beryllium compounds of the first transition metal series between VBe_2 and $FeBe_2$ *R Kuentzler and R Jesser* 1916
The size effect in impurity diffusion *J Pelleg and A Rabinovitch* 1924
Molecular orbital calculation of disordered Ni–Cu alloys *H Itoh* 1930
The energy band structure and spectroscopic properties of beryllium *P O Nilsson, G Arbman and T Gustafsson* 1937
The magnetic state of the ϵ phase of iron *G G Fletcher and R P Addis* 1951
Internal chemical potentials of electrons in metals *C H Hodges* 1916
Positron wavefunctions and energies in pure metals: a pseudopotential approach *P Kubica and M J Stott* 1969
Resistivity of solid Fe, Cu, W, Nb, Ta, Mo, and Pd using t matrix *S N Khanna and A Jain* 1982
A Study of the Nernst–Ettinghausen coefficient of silver and silver alloys *R Fletcher and D R Williams* 1987
Quantum size effects in metal particles and thin films by an extended RPA *M Cini and P Ascarelli* 1998
Pressure enchanced superconductivity in $NbSe_2$ *T F Smith, R N Shelton and R E Schwall* 2009
Calculation of tunnel current due to vortex core excitations in clean superconductors *W T Band and G B Donaldson* 2017
A Mössbauer determination of the magnitude and sign of hyperfine fields at ^{119}Sn nuclei in Heusler alloys *J S Brooks and J M Williams* 2033
NMR study of the spin polarization in dilute Cu based magnetic alloys *H Alloul, J Darville and P Bernier* 2050

The low temperature magnetoheat capacity of copper$_{99}$ cobalt
J C Matthews, J R Moon and S J Wozniak 2067
Calculation of electric field gradients in metals *K W Lodge and C A Sholl* 2073
Band structure and optical properties of gallium *O Hunderi and R Ryberg* 2084
Amorphus gallium—a free electron metal *O Hunderi and R Ryberg* 2096

NO 12 DECEMBER 1974

LETTERS TO THE EDITOR

A phenomenological model explaining the superconducting properties of compounds with the A-15 structure *G Bongi, Ø Fischer and H Jones* L259
Size dependence of the image potential *M Cini* L263
A magnetic cluster model for spin glasses *D A Smith* L266

PAPERS

An x ray diffraction investigation of molten indium–nickel alloys by the partial interference function method *B R Orton and S P Woodisse* 2103
The temperature dependent part of the impurity resistivity in aluminium alloys with germanium *N Kontoleon, K Papathanasopoulos, K Chountas and C Papastaikoudis* 2109
Vacancy formation energies and Faber's formula *P Minchin, A Meyer and W H Young* 2117
A compilation of dislocation energy and its derivatives in anisotropic crystals *D J Bacon and R O Scattergood* 2126
Volume and temperature variation of Gruneisen constant *S Tolpadi* 2138
The application of the Morse potential function in ordered Cu_3Au alloy: II. Thermal expansion and the equation of state *D Roy, A Manna and S P Sen Gupta* 2145
The magnetic properties of some Gd–Sm and Gd–Nd alloys *H Fujimori, K Goto and D E G Williams* 2152
Calculation of elastic constants of α phase Cu–Al alloys *T Soma* 2157
Diffusion thermopower of metals *A Hasegawa* 2164
Cohesive energies of simple metals *R E McLaren and C A Sholl* 2172
Positron annihilation in disordered binary alloys *D G Lock and R N West* 2179
The resistivity and thermoelectric power of the palladium–gold alloy system *T Rowland, N E Cusack and R G Ross* 2189
Dilute intermetallic compounds: II. Properties of aluminium rich aluminium-transition metal phases *J B Dunlop, G Grüner and A D Caplin* 2203
Conductivity data for the transition metals derived from considerations on the charge transport in thin films *C Reale* 2218
On the resistivity of dilute Zn alloys *B A White and J P Carbotte* 2223
The superconducting upper critical field in dilute niobium molybdenum alloys *R E Somekh* 2231
The physics of resistive SQUIDS modulated at low frequency *J G Park* 2239
Magnetic properties of samarium *K A McEwen, P F Touborg, G J Cock and L W Roeland* 2264
Renormalization and scaling in the x ray absorption and Kondo problems *J Sólyom* 2269
Resonance and magnetic anisotropy in dilute alloys of Pd, Pt with Fe, Co and Ni *D M S Bagguley and J A Robertson* 2282
Nuclear magnetic resonance studies of electric field gradients in single crystal dilute alloys of aluminium *J A R Stiles and D Li Williams* 2297
Hyperfine fields and atomic repulsion in Fe based alloys *Le Dang Khoi, P Veillet and I A Campbell* 2310
Mössbauer effect investigation of the vibrational behaviour of interstitials trapped at ^{57}Co impurities in aluminium *G Vogl, W Mansel and W Vogl* 2321
Temperature dependence of the electric field gradient at tantalum in group IIIb metals: scandium, yttrium, lutetium *T Butz and G M Kalvius* 2331

Optical constants of gadolinium and terbium films obtained from *in-situ* reflection measurements in ultra high vacuum — *R F Miller, L S Julien and A J Taylor* 2338
Photoelectric properties of evaporated Be films — *T Gustafsson, G Brodén and P-O Nilsson* 2351

Subject index

The 1974 Subject Index is based upon the Physics Abstracts Classification scheme; articles are listed, as appropriate, under one or more of the following headings:

7.000 CONDENSED MATTER: STRUCTURE, THERMAL AND MECHANICAL PROPERTIES
7.100 STRUCTURE OF LIQUIDS AND SOLIDS: CRYSTALLOGRAPHY
7.110 Techniques for structure determination
7.120 Liquids
7.150 Crystalline state
7.160 Defects in crystals
7.162 *Point defects*
7.166 *Dislocations*
7.168 Stacking faults and other planar defects
7.180 Radiation damage and other irradiation effects
7.200 MECHANICAL AND ACOUSTIC PROPERTIES
7.220 Mechanical properties of solids
7.300 LATTICE DYNAMICS
7.320 General theory
7.340 Phonons and vibrations in crystal lattices
7.390 Thermal and statistical properties of lattices
7.400 EQUATIONS OF STATE, PHASE EQUILIBRIA, PHASE TRANSITIONS
7.500 THERMAL PROPERTIES OF SOLIDS
7.600 TRANSPORT PROPERTIES (NON ELECTRONIC)
7.800 SURFACES AND INTERFACES; THIN FILMS AND WHISKERS

8.000 CONDENSED MATTER: ELECTRICAL, MAGNETIC AND OPTICAL PROPERTIES
8.100 ELECTRON STATES
8.110 General theories and computational techniques
8.120 Electronic density of states determinations
8.130 Nonlocalized, single particle electronic states
8.132 *Electron energy states in liquid metals and alloys*
8.134 *Electron energy states in amorphous solids*
8.136 *Band structure and Fermi surface of solid metals and alloys*
8.140 Localized electron states
8.160 Impurity and defect levels: positron states
8.200 ELECTRICAL TRANSPORT
8.210 Electronic conduction in metals and alloys
8.212 *Electrical and thermal conduction in crystalline metals*
8.214 *Electrical and thermal conduction in amorphous and liquid metals and alloys*
8.216 *Galvanomagnetic and thermoelectric effects*
8.218 *Relaxation times and mean free paths*
8.230 High frequency effects
8.240 Photoconduction and photovoltaic effects
8.260 Mixed conductivity and conductivity transitions
8.300 ELECTRICAL PROPERTIES OF SURFACES, INTERFACES AND THIN FILMS
8.320 Surfaces
8.360 Thin films
8.400 SUPERCONDUCTIVITY
8.410 General theory
8.420 Equilibrium properties
8.430 Nonequilibrium and transport properties
8.440 Tunnelling and coupled superconductors
8.450 Superconducting materials
8.500 MAGNETIC PROPERTIES AND MATERIALS
8.510 General theory and models of magnetic ordering
8.520 Diamagnetism and paramagnetism
8.524 *Metals and alloys*
8.526 *Local moments in dilute alloys, Kondo effect*
8.530 Magnetically ordered materials, intrinsic properties
8.531 *Saturation moments and magnetic susceptibility*
8.532 *Exchange and superexchange interactions*
8.533 *Magnetic impurity interactions*
8.534 *Critical point effects, specific heats, short range order, magnetic transitions*
8.535 *Spin arrangements*
8.536 *Spin waves*
8.540 Studies of specific magnetic materials
8.542 *Ferromagnetics*

8.544 *Antiferromagnetics*
8.550 Domain effects, magnetization curves, hysteresis
8.570 Magnetomechanical effects, magnetostriction
8.600 MAGNETIC RESONANCE AND RELAXATION, MOSSBAUER EFFECT
8.630 Electron spin resonance and relaxation
8.660 Nuclear magnetic resonance and relaxation
8.680 Mössbauer effect: other γ ray spectroscopy
8.800 OPTICAL PROPERTIES AND CONDENSED MATTER SPECTROSCOPY
8.810 Optical properties and materials
8.820 Optical spectra
8.850 Other spectra and interactions between radiation and matter
8.860 Optical properties of thin films
8.900 ELECTRON AND ION EMISSION BY LIQUIDS AND SOLIDS AND IMPACT PHENOMENA

9.000 INTERDISCIPLINARY SUBJECTS
9.100 MATERIALS SCIENCE AND METALLURGY

7.000 CONDENSED MATTER: STRUCTURE, THERMAL AND MECHANICAL PROPERTIES

7.100 STRUCTURE OF LIQUIDS AND SOLIDS: CRYSTALLOGRAPHY

7.110 Techniques for structure determination

Evidence for a continuous s–d transition in fcc caesium at high pressure *D B McWhan, G Parisot and D Bloch* FL69

The theory of electron diffraction by the void lattice *A M Stoneham* F1335

An x ray diffraction investigation of molten indium–nickel alloys by the partial interference function method *B R Orton and S P Woodisse* F2103

7.120 Liquids

Chemical potentials and fluctuations in liquid sodium–caesium alloys *K Ichikawa and J C Thompson* FL9

Hard sphere structure factors for liquid metals *I H Umar and W H Young* F525

Thermodynamic calculations for liquid alloys with an application to sodium–potassium *I H Umar, A Meyer, M Watabe and W H Young* F1691

The Born–Green equation for liquid metals *R Kumaravadivel, R Evans and D A Greenwood* F1839

Comment on the application of the absorption sum rule to the optical properties of liquid metals *A N Bloch and S A Rice* F1849

7.150 Crystalline state

Crystalline effects in the theory of lattice contraction at metal surfaces *G P Alldredge and L Kleinman* FL207

Monte Carlo simulation of the order–disorder transition on the lattice model of the gold modified brass *J Mościński and Z Rycerz* F1853

7.160 Defects in crystals

The anomalous ^{27}Al NMR second moment in metallic aluminium *E R Andrew, W S Hinshaw and R S Tiffen* FL215

Influence of the core conditions on the nonlinear anisotropic elastic field of a straight dislocation *C Teodosiu* FL225

Investigation of Frenkel defects in electron irradiated copper by Huang scattering of x rays: I. Results for single interstitials *P Ehrhart and U Schlagheck* F1575

Investigation of Frenkel defects in electron irradiated copper by Huang scattering of x rays: II. Thermal annealing *P Ehrhart and U Schlagheck* F1589

Lattice statics of closed packed hexagonal metals: vacancy in magnesium *Z D Popovic and J P Carbotte* F1599

X ray line broadening study of splat cooled aluminium and aluminium tin and aluminium nickel solid solutions *A Kirin and A Bonefačić* F1608

The morphology of planar vacancy aggregates in copper *E J Savino and R C Perrin* F1889

The temperature dependent part of the impurity resistivity in aluminium alloys with germanium *N Kontoleon, K Papathanasopoulos, K Chountas and C Papastaikoudis* F2109

Vacancy formation energies and Faber's formula *P Minchin, A Meyer and W H Young* F2117

Mössbauer effect investigation of the vibrational behaviour of interstitials trapped at ^{57}Co impurities in aluminium *G Vogl, W Mansel and W Vogl* F2321

7.162 Point defects

Lattice statics calculations for interstitial atoms in tungsten *R Benedek and P S Ho* F183

Vacancy–silicon binding energy in aluminium by positron annihilation *S M Kim, W J L Buyers, P Martel and G M Hood* F343

On the vacancy formation energy and volume of simple cubic metals *Z D Popovic, J P Carbotte and G R Piercy* F351

7.166 Dislocations

On some three dimensional dislocation problems in anisotropic media *R J Asaro and D M Barnett* FL103

Consideration of the exsistence of surface wave (Rayleigh wave) solutions in anisotropic elastic crystals *D M Barnett and J Lothe* F671

An image force theorem for dislocations in anisotropic bicrystals *D M Barnett and J Lothe* F1618

Self energy and interaction of jogs *A Golebiewska-Lasota* F1636

A compilation of dislocation energy and its derivations in anisotropic crystals *D J Bacon and R O Scattergood* F2126

7.168 Stacking faults and other planar defects

The structure of twin boundaries in body centred cubic metals *P D Bristowe, A G Crocker, and M J Norgett* F1859

Stacking fault energies of Be, Mg, Al, Cu, Ag and Au *J F Devlin* F1865

7.180 Radiation damage and other irradiation effects

Ferromagnetic after effect due to interstitials in electron irradiated nickel *H Knöll, U Dedek and W Schilling* F1095

The theory of electron diffraction by the void lattice *A M Stoneham* F1335

The Z_1 oscillations in stopping power of metals for low velocity channelled heavy ions *A P Pathak* F1883

7.200 MECHANICAL AND ACOUSTIC PROPERTIES

7.220 Mechanical properties of solids

The effect of a long range oscillatory interaction on the stability of alloys *C S G Cousins* F1

The energy and elastic constants of simple metals in terms of pairwise interactions *M W Finnis* F1645

Calculation of elastic constants of α phase Cu–Al alloys *T Soma* F2157

7.300 LATTICE DYNAMICS

7.320 General theory

Crystal dynamics of some cubic metals on an angular force model *S Jogi* F11

Angular forces and normal vibrations in alkali metals *J Prakash, L P Pathak and M P Hemkar* F1107

7.340 Phonons and vibrations in crystal lattices

A first principles generalized pseudopotenial calculation for the phonon spectra of zinc *J Panitz, P H Cutler and W F King III* FL106

Lattice parameters of lithium–magnesium and lithium–silver alloys *L D Firth N H A Nowaira and W Scott* FL200

Third order perturbation theory and lattice dynamics of simple metals *C M Bertoni, V Bortolani, C Calandra and F Nizzoli* F19

On the modified Bhatia's model for the lattice dynamics of transition (hcp) metals *S S Kushwaha* F663

A simple theory of the electron–phonon mass enhancement in transition metal compounds *I R Gomersall and B L Gyorffy* F1204

Band modes of hydrogen in Pd–10Agh and Pd–20AgH by inelastic neutron scattering *M R Chowdhury* F1657

A neutron measurement of the effect of a magnetic field on phonon lifetime in niobium *R Pynn and J D Axe* F1898

An investigation of the Debye–Waller factor and Debye temperature of aluminium using nearest neighbour central force pair interactions *R C G Killean* F1908

Mössbauer effect investigation of the vibrational behaviour of interstitials trapped at ^{57}Co impurities in aluminium *G Vogl, W Mansel and W Vogl* F2321

7.390 Thermal and statistical properties of lattices

Monte Carlo simulation of the order-disorder transition on the lattice model of the gold modified brass *J Mościński and Z Rycerz* F1853

An investigation of the Debye–Waller factor and Debye temperature of aluminium using nearest neighbour central force pair interactions *R C G Killean* F1908

The application of the Morse potential function in ordered Cu_3Au alloys: II. Thermal expansion and the equation of state *D Roy, A Manna and S P Sen Gupta* F2145

7.400 EQUATIONS OF STATE, PHASE EQUILIBRIA, PHASE TRANSITIONS

Order–disorder critical phenomena in FeCo *J Orehotsky and K Schröder* F196

Order–disorder transition in a model binary alloy *F Brouers, J Giner and J Van der Rest* F214

The equation of state and the temperature variation of the second order elastic constants of sodium and potassium *R Srinivasan and K S Girirajan* F951

A simple theory of some phase transitions *M W Finnis and V Heine* F960

The theory of distorted structures in the Cd–Mg and In–Tl alloy systems *M W Finnis* F969

Monte Carlo simulation of the order–disorder transition on the lattice model of the gold modified brass *J Mościński and Z Rycerz* F1853

The application of the Morse potential function in ordered Cu_3Au alloy: II. Thermal expansion and the equation of state *D Roy, A Manna and S P Gen Gupta* F2145

7.500 THERMAL PROPERTIES OF SOLIDS

Thermodynamic calculations for liquid alloys with an application to sodium–potassium

I H Umar, A Meyer, M Watabe and W H Young F1691
An investigation of the Debye–Waller factor and Debye temperature of aluminium using nearest neighbour central force pair interactions *R C G Killean* F1908
Low temperature specific heat of beryllium compounds of the first transition metal series between VBe_2 and $FeBe_2$ *R Kuentzler and R Jesser* F1916
Volume and temperature variation of Grüneisen constant *S Tolpadi* F2138
The application of the Morse potential function in ordered Cu_3Au alloy: II. Thermal expansion and the equation of state *D Roy, A Manna and S P Sen Gupta* F2145

7.600 TRANSPORT PROPERTIES (NON ELECTRONIC)
Nuclear spin lattice relaxation and translational diffusion in beryllium *Y Chabre* F626
The size effect in impurity diffusion *J Pelleg and A Rabinovitch* F1924

7.800 SURFACES AND INTERFACES; THIN FILMS AND WHISKERS
The structure of non crystalline films of some transition and noble metals *P J Grundy and L B Davies* FL111

8.000 CONDENSED MATTER: ELECTRICAL, MAGNETIC AND OPTICAL PROPERTIES

8.100 ELECTRON STATES
Stationary and moving charge densities in nearly-free-electron metals *M A Ball* FL196
Crystalline effects in the theory of lattice contraction at metal surfaces *G P Alldredge and L Kleinman* FL207
Surface diffusion of atom clusters *W R Graham and G Ehrlich* FL212
Normal modes and the RPA correlation energy of a metallic film *A Griffin, H Kranz and J Harris* F1744
Internal chemical potentials of electrons in metals *C H Hodges* F1961
Diffusion thermopower of metals *A Hasegawa* F2164
Cohesive energies of simple metals *R E McLaren and C A Sholl* F2172

8.110 General theories and computational techniques
The choice of basic seed cluster in structural models of amorphous transition elements *J G Wright* FL187
A calculation of the Coulomb correlation energy U for transition metals in Hubbard's model *B N Cox, M A Coulthard and P Lloyd* F807
A new approach to strong correlations in the Hubbard model *H Capellmann* F1112
General expansions for a geometrical plane wave parametrization scheme for the Fermi surfaces of bcc, fcc and hcp metals *K K Chia, A P Cracknell and R J Walker* F1121
Electronic structure studies of solids: IV. Physical quantities from rigorous Hartree–Fock results for lithium crystals *L Kumar and H J Monkhorst* F1135

8.120 Electronic density of states determinations
The density of states of liquid copper *G P Williams and C Norris* FL175
Influence of local fluctuations of concentration on the electronic density of states in disordered binary alloys *P Algrain, D Calecki and N Pottier* F202
Relativistic effective Hamiltonian for calculation of electron energy bands *C F Osborne, G C Fletcher and R Miller* F361
The volume dependence of the electron–phonon mass enhancement and the pressure dependence of T_c in transition metals *V K Ratti, R Evans and B L Gyorffy* F371
Electronic structure studies of solids: IV. Physical quantities from rigorous Hartree–Fock results for lithium crystals *L Kumar and H J Monkhorst* F1135
Virtual bound states in dilute transition metal and noble metal based disordered alloys *C L Cook and P V Smith* F1344
Electron density in metals *V K Ratti and J M Ziman* F1684

8.130 Nonlocalized, single particle electronic states
Backscattering in dilute silver alloys *N A W Holzwarth, M J G Lee and P T Coleridge* FL129
Electronic structure studies of solids: IV. Physical quantities from rigorous Hartree–Fock results for lithium crystals *L Kumar and H J Monkhorst* F1135
Simple analytic model for the hyperfine contact density in a metal *J P Perdew* F1552

8.132 Electron energy states in liquid metals and alloys
Pressure equation of state of liquid metals *M Watabe and W H Young* FL29

The density of states of liquid copper *G P Williams and C Norris* FL175
Order–disorder transition in a model binary alloy *F Brouers, J Giner and J Van der Rest* F214
Hard sphere structure factors for liquid metals *I H Umar and W H Young* F525
Electronic density of states for liquid metals and alloys in the tight binding approximation *B Movaghar, D E Miller and K H Bennemann* F687
Effect of disorder on the optical properties of Au, Ag and Au_xAg_{1-x} *F Brouers, M Brauwers and J Rivory* F928
The theory of disordered alloys II. Continued fractions and cluster theory *R L Jacobs* F1351
Thermodynamic calculations for liquid alloys with an application to sodium–potassium *I H Umar, A Meyer, M Watabe and W H Young* F1691

8.134 Electron energy states in amorphous solids
Electronic density of states of disordered systems from information about local surroundings MCPN approximations *J Slechta* F1148

8.136 Band structure and Fermi surface of solid metals and alloys
Positron annihilation gamma ray lineshapes in metals *T E Jackman, C W Schulte, J L Campbell, P C Lichtenberger, I K MacKenzie and M R Wormald* FL1
A model for Kondo type intermetallic compounds with small effective moments *G Grüner and N F Mott* FL16
Quadrupolar Hamiltonian on Ir nuclei in dilute alloys of nickel *C Demangeat* FL64
De Haas–van Alphen effect in yttrium *R C Young, R G Jordan, D W Jones and V J Hems* FL84
Quantum oscillations in ultrasonic absorption and the Fermi surface of indium *J E Cowey, R Gerber and L Mackinnon* F39
The band structure of the group 5A alloys: magnetoreflection experiments *M J Apps* F47
Calculation of the band structure, Fermi surface, and interband optical conductivity of lithium *J P Perdew and S H Vosko* F380
Crystal potentials and APW and KKRZ pseudopotentials *A Meyer, W H Young and M A C Devillers* F394
Scattering from impurities in silver and gold alloys *R Harris and B G Mulimani* F703
The Fermi surface of mercury from an APW interpolation *M A C Devillers and A R de Vroomen* F711
Charge and spin density in the iron borides *R S Perkins and P J Brown* F906
Studies of conduction electron scattering in copper using the de Haas-van Alphen effect *R G Poulsen, D L Randles and M Springford* F981
Electronic properties of small silver particles: the optical constants and their temperature dependence *U Kreibig* F999
On the magnetic susceptibilities in disordered alloys I: single band model *M Nauciel-Bloch and R Riedinger* F1032
Interactions between transitional impurities in noble (or transition) metal based alloys *J C Parlebas and F Gautier* F1044
Electronic and optical properties of metallic tin *M A E A Ament and A R de Vroomen* F1359
Connection between dephasing of the de Haas–van Alphen effect and scattering of electrons *B R Watts* F1371
Validity of de Haas–van Alphen dephasing calculations *B R Watts* F1387
Electronic structure of noble (or transition) metal based alloys: charge oscillations, Knight shifts and pair interaction energies *J C Parlebas* F1392
Magnetic properties and electronic structure of rare earth–transition metal intermetallic compounds *A A Gomes and A P Guimarães* F1454
Anisotropic relaxation times for impurity scattering on the Fermi surface *R S Sorbello* F1665
Radio frequency size effect measurements in cadmium and zinc *A Myers, R S Thompson and Z Ali* F1707
Molecular orbital calculation of disordered Ni–Cu alloys *H Itoh* F1930
The energy band structure and spectroscopic properties of beryllium *P O Nilsson, G Arbman and T Gustafsson* F1937
Band structure and optical properties of gallium *O Hunderi and R Ryberg* F2084
Amorphous gallium—a free electron metal *O Hunderi and R Ryberg* F2096

8.140 Localized electron states
Backscattering in dilute silver alloys *N A W Holzwarth, M J G Lee and P T Coleridge* FL129
The t matrix pole and resonant impurity states in alloys *D Jacobi and M J Zuckermann* FL136
Positron diffusion and trapping at vacancies *C H Hodges* FL230

Écran selfconsistent d'une impureté dans un métal normal: application au cas de l'alliage dilué AlMg *P Léonard* F513
Ferromagnetism and strong correlations in metals *H Capellmann* F1466

8.160 Impurity and defect levels: positron states
Positron annihilation in the liquid alkali metals *G Mori* F821
An investigation of positron trapping in indium *V H C Crisp, D G Lock and R N West* F830
Positron wavefunctions and energies in pure metals: a pseudopotential approach *P Kubica and M J Stott* F1969
Positron annihilation in disordered binary alloys *D G Lock and R N West* F2179

8.200 ELECTRICAL TRANSPORT
8.210 Electronic conduction in metals and alloys
The temperature dependent resistivity of dilute copper alloys *T Dosdale and G J Morgan* FL32
Comment on Transport properties of dilute copper–chromium alloys in magnetic fields *I M Templeton* FL115
Backscattering in dilute silver alloys *N A W Holzworth, M J G Lee and P T Coleridge* FL129
Strong and weak ferromagnetism in Ni–Fe alloys *I A Campbell* FL181
Electrical and optical properties of mercury at low densities *M A C Devillers* FL236
Ultraviolet photoelectron study of Ag–Au alloys *A D McLachlen, J Liesegang, R C G Leckey and J G Jenkin* FL253
The electrical transport properties of platinum at room temperature *T Dosdale and D Livesey* F68
Are the scaling laws for the Kondo problem exact? *J Sólyom and Z Zawadowski* F80
Resistance minima and deviations from Matthieson's rule in dilute palladium alloys *D Grieg and J A Rowlands* F536
Electronic transport in substitutionally disordered alloys *R S Tripathi, M P Das and S K Joshi* F717
On the magnetic and electrical properties of nearly equiatomic ordered FeRh alloys *C J Schinkel, R Hartog and F H A M Hochstenbach* F1412
d Resonance effects associated with rare earths and dilute rare earth alloys *R Devine* F1447
Umklapp electron–phonon scattering anisotropy and deviations from Matthiessen's rule *P N Trofimenkoff and A B Bhatia* F1719
Resistivity of solid Fe, Cu, W, Nb, Ta, Mo and Pd using t matrix *S N Khanna and A Jain* F1982
The resistivity and thermoelectric power of the palladium–gold alloy system *T Rowland, N E Cusack and R G Ross* F2189
Dilute intermetallic compounds: II. Properties of aluminium rich aluminium–transition metal phases *J B Dunlop G Grüner and A D Caplin* F2203

8.212 Electrical and thermal conduction in crystalline metals
Resistivity of Kondo alloys below T_K *B Kozarzewski* FL35
Effect of pressure on impurity–impurity interactions in a dilute Au(Fe) alloy *J S Schilling, J Crone, P J Ford and J A Mydosh* FL116
Magnetoresistivity of dilute magnetic alloys *G S Poo* FL121
Deviations from Matthiessen's rule in Li:Mg *F Kus and J P Carbotte* F91
Electrical resistivity of the AuV system *P J Ford, T E Whall and J W Loram* F225
The T^2 electrical resistivity in nickel and palladium alloys *D Greig and J A Rowlands* F232
The temperature dependent resistivity of dilute aluminium alloys *T Dosdale and G J Morgan* F401
Spin fluctuation effects in ruthenium alloys *F C C Kao and G Williams* F419
On the thermal conductivity of dilute alloys at low temperatures *D Schotte and U Schotte* F429
The influence of phonon conductivity on the thermal magnetoresistivity tensor of metals *R Fletcher* F1155
Electrical and magnetic properties of Au–Ni alloys *J R Clinton, E H Tyler and H L Luo* F1162
The low temperature resistivity of RhFe *R L Rusby* F1265
Umklapp electron–phonon scattering anisotropy and deviations from Mattheissen's rule *P N Trofimenkoff and A B Bhatia* F1719
The specific heat of high purity gadolinium between 1·5 and 14 K *P Wells, P C Lanchester, D W Jones and R G Jordan* F1729
Conductivity data for the transition metals

derived from considerations on the charge transport in thin films *C Reale* F2218
On the resistivity of dilute Zn alloys *B A White and J P Carbotte* F2223

8.214 Electrical and thermal conduction in amorphous and liquid metals
Chemical potentials and fluctuations in liquid sodium–caesium alloys *K Ichikawa and J C Thompson* FL9
Kondo effect in structurally disordered single element magnetic materials *P K Leung, J Slechta and J G Wright* FL21
Concentration dependence of electrical transport coeffiecients in conformal liquid metal alloys *M Parrinello, N H March and M P Tosi* FL142
Hard-sphere results and atomic transport properties of liquid metals *J J van Leof* FL190
Electrical and thermal resistivities of alkali metals *J Prakash and M P Hemkar* F1015

8.216 Galvanomagnetic and thermoelectric effects
Evidence for a transition from strong to weak ferromagnetism in Ni–Fe alloys from an investigation on ternary (Ni–Fe) C alloys *M C Cadeville, R Caudron, P Costa and C Lerner* FL87
The transport properties of dilute copper–chromium alloys in magnetic fields *M Read and A M Guénault* F94
The magnetoresistance of aluminium using electrodeless methods *J A Delaney* F247
Thermoelectric power of homovalent copper alloys *A M Guénault* F256
The Fermi surface of mercury from an APW interpolation *M A C Devillers and A R de Vroomen* F711
Low temperature thermoelectric power of dilute Al 3d alloys *V Zlatić and N Rivier* F732
Surface impedance of high purity metals in a weak magnetic field *R A Young and J Chelikowsky* F739
Hall effect measurements in aluminium alloys *J M Bradley and J Stringer* F839
Pair description of thermoelectric power in dilute magnetic alloys *K Matho and M T Beal-Monod* F848
Low field Hall coefficients of potassium *A Hasegawa* F1024
The thermoelectric power of AlMn alloys *J R Cooper, Z Vučić and E Babić* F1489
A study of the Nernst–Ettinghausen coefficient of silver and silver alloys *R Fletcher and D R Williams* F1987

8.218 Relaxation times and mean free paths
The temperature dependent resistivity of dilute aluminium alloys *T Dosdale and G J Morgan* F401
On the anisotropic relaxation time *R S Sorbello* F503
Low field Hall coefficients of potassium *A Hasegawa* F1024
Anisotropic relaxation times for impurity scattering on the Fermi surface *R S Sorbello* F1665

8.230 High frequency effects
Frequency dependent conductivity of pure simple metals *W Jones* F1736

8.240 Photoconduction and photovoltaic effect
A Phenomenological model explaining the superconducting properties of compunds with the A-15 structure *G Bongi, Ø Fisher and H Jones* FL259

8.260 Mixed conductivity and conductivity transitions
Chemical potentials and fluctuations in liquid sodium–caesium alloys *K Ichikawa and J C Thompson* FL9

8.300 ELECTRICAL PROPERTIES OF SURFACES, INTERFACES AND THIN FILMS

8.320 Surfaces
Theory of lattice contraction at aluminium surfaces *M W Finnis and V Heine* FL37
The surface energy of a bounded electron gas *J Harris and R O Jones* F1170

8.360 Thin Films
Some electrical properties of cobalt films *P Whyman and R V Aldridge* FL6
Kondo effect in structurally disordered single element magnetic materials *P K Leung, J Slechta and J G Wright* FL21
Size dependence of the image potential *M Cini* FL263
A calculation of the electrical conductivity of thin films of potassium and sodium *A Heiman and V Halpern* F107
Normal modes and the RPA correlation energy of a metallic film *A Griffin, H Kranz and J Harris* F1744
Quantum size effects in metal particles and thin films by an extended RPA *M Cini and P Ascarelli* F1998
Optical constants of gadolinium and terbium films obtained from *in-situ* reflection measurements in ultra high vacuum *R F Miller, L S Julien and A J Taylor* F2338

8.400 SUPERCONDUCTIVITY

Effect of lattice anharmonicity on superconductivity *J C K Hui and P B Allen* FL42

The high energy density of states in a superconducting thin film in the mixed state *R F Saffin and R J Watts-Tobin* F268

Magnetic and superconducting properties of the system $Mo_{77}Ir_{23-x}Fe_x$ *Ø Fischer, A Treyvaud, G Bongi, H Jones and R Flükiger* F1187

Pressure enhanced superconductivity of $NbSe_2$ *T F Smith, R N Shelton and R E Schwall* F2009

Vortex motion in superconductors I *O L de Lange* F1222

The physics of resistive SQUIDs modulated at low frequency *J G Park* F2239

8.410 General theory

Calculation of the electronic thermal conductivity of superconducting alloys with local states within the gap *B Leon and D Singh Nagi* FL13

8.420 Equilibrium properties

Shape effects on the magnetization of superconducting lead at 4·2 K *J Provost, E Paumier and A Fortini* F439

A simple theory of the electron–phonon mass enhancement in transition metal compounds *I R Gomersall and B L Gyorffy* F1204

Superconductivity and stability of near equiatomic V–Ru compounds at high pressure *T F Smith, R N Shelton, A C Lawson and C W Chu* F1423

8.430 Nonequilibrium and transport properties

Calculation of the electronic thermal conductivity of superconducting alloys with local states within the gap *B Leon and D Singh Nagi* FL13

The low temperature thermal conductivity of niobium–zirconium alloys *N Morton, B W James, G H Wostenholme and R J Nicholls* FL94

Superconductivity in transition metal alloys: an alternative to the rigid band model II *A R Miedema* F120

Achievement of very high critical currents in type II superconductors *W E Timms and M A R LeBlanc* F136

Dependence of flux flow voltage on field profile in type II superconductors *S M Khanna and M A R LeBlanc* F550

Magnetic field dependence of the surface reactance of superconducting tin at 174 MHz *B D Josephson* F751

The dependence of the noise voltage associated with flux motion in superconductors on the arrangement of potential leads *P Jarvis and J G Park* F1238

The physics of resistive SQUIDs modulated at low frequency *J G Park* F2239

8.440 Tunnelling and coupled superconductors

Electron tunnelling study of the superconducting high pressure phase of Bi *P Nédellec, L Dumoulin and R J Noer* FL145

A self coupled travelling wave model for superconducting tunnel junctions *L E Hasselberg* L154

Structure in superconducting aluminium tunnel junction characteristics at $eV = 4\Delta$ *W Day* F449

Renormalization of the expression for the superconducting tunnelling currents *L E Hasselberg* F1433

Calculations of tunnel current due to vortex core excitations in clean superconductors *W T Band and G B Donaldson* F2017

8.450 Superconducting materials

The low temperature thermal conductivity of niobium-zirconium alloys *N Morton, B W James, G H Wostenholme and R J Nicholls* FL94

A simple theory of the electron–phonon mass enhancement in transition metal compounds *I R Gomersall and B L Gyorffy* F1204

The superconducting upper critical field in dilute niobium molybdenum alloys *R E Somekh* F2231

8.500 MAGNETIC PROPERTIES AND MATERIALS

A model for Kondo type intermetallic compounds with small effective moments *G Grüner and N F Mott* FL16

On the absence of the finite conduction electron polarization in dilute alloys *A Zawadowski and G Grüner* FL202

A magnetic cluster model for spin glasses *D A Smith* FL266

Magnetic properties and electronic structure of rare earth–transition metal intermetallic compounds *A A Gomes and A P Guimarães* F1454

Critical concentration for the onset of ferromagnetism in Pd-Ni alloys *A P Murani, A Tari and B R Coles* F1769

The magnetic properties of some Gd–Sm and Gd–Nd alloys *H Fujimori, K Goto and D E G Williams* F1252

8.510 General theory and models of magnetic ordering

Kondo effect in structurally disordered single element magnetic materials *P K Leung, J Slechta and J G Wright* FL21

Magnetoresistivity of dilute magnetic alloys *G S Poo* FL121

Magnetic and NMR studies of the CsCl type compounds $GdMg_{1-x}Zn_x$ *K H J Buschow and A Oppelt* F1246

Itinerant ferromagnetism and susceptibility of nickel–platinum alloys *J Beille, D Bloch and M J Besnus* F1275

Ferromagnetism and strong correlations in metals *H Capellman* F1466

Interaction of spin fluctuations in ferromagnetic and nearly ferromagnetic itinerant systems *A Kawabata* F1477

Effects of anisotropic exchange and magnetoelastic coupling magnetic phase transitions in holmium and erbium *B W Southern and D Sherrington* F1755

The magnetic state of the ε phase of iron *G C Fletcher and R P Addis* F1951

8.520 Diamagnetism and paramagnetism

Magnetic properties, cobalt clusters and giant moments in CoGa *A Amamou and F Gautier* F563

The spin suceptibility of liquid transition metal alloys *R Bass* F1256

8.524 Metals and alloys

NMR study and magnetic properties of vanadium based alloys with transition metals *P Panissod* F484

Ferromagnet or spin glass? Magnetic ordering in Au–Fe alloys *A P Murani* F757

Critical concentration for the onset of ferromagnetism in Pd–Ni alloys *A P Murani, A Tari and B R Coles* F1769

Theory of the magnetic susceptibility of liquid Ce–Ni alloys *M Avignon and L M Falicov* F1782

8.526 Local moments in dilute alloys, Kondo effect

Kondo effect in structurally disordered single element magnetic materials *P K Leung, J Slechta and J G Wright* FL21

Resistivity of Kondo alloys below T_K *B Kozarzewski* FL35

The Kondo effect and the highly correlated gas *N F Mott* FL46

Evidence for a transition from strong to weak ferromagnetism in Ni–Fe alloys from an investigation on ternary (Ni–Fe) C alloys *M C Cadeville, R Caudron, P Costa and C Lerner* FL87

Resistance minima in (V–Cr)Fe alloys *R L Rusby and B R Coles* FL161

A simple model for the frequency dependent conductivity of the Kondo system *M Ahmed* FL167

Electrical resistivity of Pt–Mn alloys *B V B Sarkissian and R H Taylor* FL243

Resistance minimum in spin glasses *N Rivier* FL249

The transport properties of dilute copper–chromium alloys in magnetic fields *M Read and A M Guénault* F94

Thermoelectric power of homovalent copper alloys *A M Guénault* F256

Spin fluctuation effects in ruthenium alloys *F C C Kao and G Williams* F419

Resonance linewidth of a dilute magnetic alloy with heavy impurities *G P Haberkern* F582

^{63}Cu spin lattice relaxation in Cu–Mn and Cu–Cr : electron spin dynamics *H Alloul and P Bernier* F870

The low temperature resistivity of RhFe *R L Rusby* F1265

The thermoelectric power of AlMn alloys *J R Cooper, Z Vučić and E Babić* F1489

Host NMR in dilute magnetic alloys: the spatial variation of the spin polarization *H Alloul* F1501

NMR study of the spin polarization on dilute Cu based magnetic alloys *H Alloul, J Darville and P Bernier* F2050

Renormalization and scaling in the x ray absorption and Kondo problem *J Sólyom* F2269

8.530 Magnetically ordered materials, intrinsic properties

Strong and weak ferromagnetism in Ni–Fe alloys *I A Campbell* FL181

Magnetism and resistivity of some dilute rare earth–zinc compounds *A M Stewart and B R Coles* F458

On the magnetic susceptibilities in disordered alloys I: single band model *M Nauciel-Bloch and R Riedinger* F1032

A Mössbauer determination of the magnitude and sign of hyperfine fields at ^{119}Sn nuclei in Heusler alloys *J S Brooks and J M Williams* F2033

8.531 Saturation and moments and magnetic susceptibility

Polarization analysis of neutron scattering from PdMn 10 at % alloy *N Ahmed and T J Hicks* FL124

The reversible susceptibilities of dysprosium and terbium *A del Moral and E W Lee* F280

Magnetic susceptibilities and nuclear magnetic resonance measurements in $(V_{1-x}Cr_x)Be_{12}$ alloys *S Domngang and R Jesser* F890
On the magnetic susceptibilities in disordered alloys I: single band model *M Nauciel-Bloch and R Riedinger* F1032
Itinerant ferromagnetism and susceptibility of nickel–platinum alloys *J Beille, D Bloch and M J Besnus* F1275
Theory of the magnetic susceptibility of liquid Ce–Ni alloys *M Avignon and L M Falicov* F1782
Effect of carbon dilution on the low temperature thermal and magnetic properties of fcc nickel base alloys *R Caudron, J J Meunier and P Costa* F1791
Magnetic properties of samarium *K A McEwen, P F Touborg, G J Cock and L W Roeland* F2264

8.532 Exchange and superexchange interactions
Interactions between transitional impurities in noble (or transition) metal based alloys *J C Parlebas and F Gautier* F1044

8.333 Magnetic impurity interactions
On the effect of spin–orbit coupling on impurity atoms in cubic ferromagnetic alloys *G A Gehring and H C W L Williams* F291
Magnetic studies of oxidized impurities in pure copper using a SQUID system *F R Fickett and D B Sullivan* F900
A Mössbauer study of iron precipitates in CuFe alloys *S J Campbell and P E Clark* F1073
Electronic structure of noble (or transition) metal based alloys charge oscillations, Knight shifts and pair interaction energies *J C Parlebas* F1392
Host NMR in dilute magnetic alloys: the spatial variation of the spin polarization *H Alloul* F1501
NMR study of the spin polarization in dilute Cu based magnetic alloys *H Alloul, J Darville and P Bernier* F2050

8.534 Critical point effects, specific heats, short range order, magnetic transitions
Functional integral transformation of the Anderson model into the s–d exchange model *G Morandi and D Sherrington* FL51
Evidence for a transition from strong to weak ferromagnetism in Ni–Fe alloys from an investigation on ternary (Ni–Fe)C alloys *M C Cadeville, R Caudron, P Costa and C Lerner* FL87
The specific heat of magnetic Au_3Mn *P Wells* F767
Model of the antiferromagnetic–antiferromagnetic transition in Mn_3Pt alloys *J A Ricodeau* F1285
The low temperature magnetoheat capacity of copper$_{99}$ cobalt *J C Matthews, J R Moon and S J Wozniak* F2067

8.535 Spin arrangements
Kondo effect in structurally disordered single element magnetic materials *P K Leung, J Slechta and J G Wright* FL21
Charge and spin density in the iron borides *R S Perkins and P J Brown* F906

8.536 Spin waves
Anisotropic exchange interaction in the conical magnetic phase of erbium *J Jensen* F1065

8.540 Studies of specific magnetic materials
Electrical and magnetic properties of Au–Ni alloys *J R Clinton, E H Tyler and H L Luo* F1162
On the magnetic and electrical properties of nearly equiatomic ordered FeRh alloys *C J Schinkel, R Hartog and F H A M Hochstenbach* F1412
Magnetic properties of NdZn *K H J Buschow, B van Laar and J B A A Elemans* F1517
A model for induced moment ferromagnetism in some praseodymium–transition metal compounds *M J Zuckermann* F1800

8.542 Ferromagnets
Magnetic entropy of $ZrZn_2$ *R Viswanathan* FL57
On the effect of spin–orbit coupling on impurity atoms in cubic ferromagnetic alloys *G A Gehring and H C W L Williams* F291
Magnetization and microwave resonance in Gd:Y alloys *D M S Bagguley, J Liesegang and K Robinson* F594
Charge and spin density in the iron borides *R S Perkins and P J Brown* F906
The low temperature magnetization of ferromagnetic metals *M Yamada* F1819
A Mössbauer determination of the magnitude and sign of hyperfine fields at ^{119}Sn nuclei in Heusler alloys *J S Brooks and J M Williams* F2033

8.544 Antiferromagnets
The reversible susceptibilities of dysprosium and terbium *A del Moral and E W Lee* F280
A Mössbauer study of iron precipitates in CuFe alloys *S J Campbell and P E Clark* F1073

The role of harmonics in the first order antiferromagnetic to paramagnetic transition in chromium *C Y Young and J B Sokoloff* F1304
Magnetic properties of samarium *K A McEwen, P F Touborg, G J Cock and L W Roeland* F2264

8.550 Domain effects, magnetization curves, hysteresis
Effects of magnetic domains on the susceptibility of gadolinium near the Curie temperature *K R Sydney, G V H Wilson, D H Chaplin and T J McKenna* FL98
The reversible susceptibilities of dysproium and terbium *A del Moral and E W Lee* F280
Ferromagnetic aftereffect due to interstitials in electron irradiated nickel *H Knöll, U Dedek and W Schilling* F1095

8.560 Thin films
Some electrical properties of cobalt films *P Whyman and R V Aldridge* FL6

8.570 Magnetochemical effects, magnetostriction
A group theoretical study of selection rules for magnon–phonon interactions in ferromagnetic hcp metals *A P Cracknell* F466

8.600 MAGNETIC RESONANCE AND RELAXATION, MOSSBAUER EFFECT
Nuclear spin lattice relaxation and translational diffusion in beryllium *Y Chabre* F626
Electric quadrupole intermediate state perturbations in nuclear orientation with particular reference to Bi isotopes in Fe and Ni *P D Johnston and N J Stone* F1522

8.610 General theory of resonance and relaxation
Resonance and magnetic anisotropy in dilute alloys of Pd, Pt and Ni *D M S Bagguley and J A Robertson* F2282

8.630 Electron spin resonance and relaxation
Electron spin resonance of Gd ($4f^7$) in Pd *R H Taylor and B R Coles* F303
The effect that finite lattice spacing has upon the ESR Bloch equations *S E Barnes* F1535

8.660 Nuclear magnetic resonance and relaxation
A CW NMR study of the hyperfine field perturbations at Fe sites in Fe rich FeCr alloys *E F Mendis* FL59
Quadrupolar Hamiltonian on Ir nuclei in dilute alloys of nickel *C Demangeat* FL64
Nuclear quadrupole-interaction of ^{111}Cd in zinc *P Raghavan, R S Raghavan, E N Kaufman, K Krien and R A Naumann* FL80
The anomalous ^{27}Al NMR second moment in metallic aluminium *E R Andrew, W S Hinshaw and R S Tiffen* FL215
The hyperfine interaction of homium in ferromagnetic rare earth alloys *I S MacKenzie, M A H McCausland and A R Wagg* F315
NMR study and magnetic properties of vanadium based alloys with transition metals *P Panissod* F484
^{63}Cu spin lattice relaxation in Cu–Mn and Cu–Cr: electron spin dynamics *H Alloul and P Bernier* F870
Magnetic susceptibilities and nuclear magnetic resonance measurements in $(V_{1-x}Cr_x)Be_{12}$ alloys *S Domngang and R Jesser* F890
Magnetic and NMR studies of the CsCl type compounds $GdMg_{1-x}Zn_x$ *K H J Buschow and A Oppelt* F1246
Single crystal studies of electric field gradients in dilute alloys: III. Non transition metal impurities in aluminium and copper *R Nevald, B L Jensen and P B Fymbo* F1320
Host NMR in dilute magnetic alloys: the spatial variation of the spin polarization *H Alloul* F1501
Simple analytic model for the hypefine contact density in a metal *J P Perdew* F1552
Nucleaf quadrupolar relaxation in liquid metals *C A Sholl* F1556
NMR study of the spin polarization in dilute Cu based magnetic alloys *H Alloul, J Darville and P Bernier* F2050
Calculation of electric field gradients in metals *K W Lodge and C A Sholl* F2073
Nuclear magnetic resonance studies of electric field gradients in single crystal dilute alloys of aluminium *J A R Stiles and D Li Williams* F2297
Hyperfine fields and atomic repulsion in Fe based alloys *Le Dang Khoi, P Veillet and I A Campbell* F2310

8.680 Mössbauer effect: Other γ ray spectroscopy
^{57}Mössbauer spectra in splat quenched Al–0·5, 1, 3 and 5 at % Fe alloys *S Nasu, U Gonser, P H Shingu and Y Murakami* FL24

Mössbauer spectra of invar alloys *B Window* F329
The temperature dependence of the hyperfine interactions at ^{119}Sn in iron *D C Price* F639
Mössbauer effect investigation of Y–Fe compounds *P C M Gubbens, J H F Van Apeldoorn, A M van der Kraan and K H J Buschow* F921
A Mössbauer study of iron precipitates in CuFe alloys *S J Campbell and P E Clark* F1073
A Mössbauer determination of the magnitude and sign of hyperfine fields at ^{119}Sn nuclei in Heusler alloys *J S Brooks and J M Williams* F2033
Mössbuaer effect investigation of the vibrational behaviour of interstitials trapped at ^{57}Co impurities in aluminium *G Vogl, W Mansel and W Vogl* F2321
Temperature dependence of the electric field gradient at tantalum in group IIIb metals: scandium yttrium lutetium *T Butz and G M Kalvius* F2331

8.800 OPTICAL PROPERTIES AND CONDENSED MATTER SPECTROSCOPY

Electronic and optical properties of metallic tin *M A E A Ament and A R de Vroomen* F1359
Electric quadrupole intermediate state perturbations in nuclear orientation with particular reference to Bi isotopes in Fe and Ni *P D Johnston and N J Stone* F1522
Band structure and optical properties of gallium *O Hunderi and R Ryberg* F2084
Amorphous gallium—a free electron metal *O Hunderi and R Ryberg* F2096

8.810 Optical properties and materials

Electrical and optical properties of mercury at low densities *M A C Devillers* L236
The band structure of the group 5A alloys: magnetoreflection experiments *M J Apps* F47
Pseudopotential calculations on the optical properties of palladium *C Y Fong* F775
Comparison of the optical properties of V, Cr and Mn with nondirect transitions calculations *M R Steel* F783
Electronic properties of small silver particles: the optical constants and their temperature dependence *U Kreibig* F999
Comment on the application of the absorption sum rule to the optical properties of liquid metals *A N Bloch and S A Rice* F1849
Optical constants of gadolinium and terbium films obtained from *in-situ* reflection measurements in ultra high vacuum *R F Miller, L S Julien and A J Taylor* F2338

8.820 Optical Spectra

Optical absorption spectra of surface plasmons in small copper particles *G C Papavassiliou and Th Kokkinakis* FL67
Calculation of the band structure, Fermi surface, and interband optical conductivity of lithium *J P Perdew and S H Vosko* F380
Effect of disorder on the optical properties of Au, Ag and Au_xAg_{1-x} *F Brouers, M Brauwers and J Rivory* F928

8.850 Other spectra and interactions between radiation and matter

On the x ray emission edge shape of free electron metals *J D Dow, L N Watson and D J Fabian* FL76
Compton profiles of the alloys TiNi, Ti_2Ni and $TiNi_3$ *T Paakkari and S Manninen* L133
On the location of unoccpied 4f states in rare earth metals *B D Padalia and D J Fabian* FL179
Multiparticle origin of radiofrequency echoes in metallic powders *Z A Pacult, P C Reidi and D P Tunstall* FL184
On the x ray edge anomalies in Li *B Bergerson, P Jena and T McMullen* FL219
The 4f states in lanthanum *J M Mariot and R C Karnatak* FL223
X ray study of line shifts and band spectra in the alloys TiNi, TiCo and TiFe *E Källne* F167
X ray photoelectron studies of thorium and uranium *J C Fuggle, A F Burr, L M Watson, D J Fabian and W Lang* F335
X ray photoelectron studies of oxygen adsorption on niobium metal *M K Bahl* F497
X ray spectroscopic study of 4f heavy rare earth metals *B D Padalia, S N Gupta, V P Vijayavargiya and B C Tripathi* F938
K absorption edge of zirconium in some of its compounds *M K Gupta and A K Nigam* F947
A Mössbauer study of iron precipitates in CuFe alloys *S J Campbell and P E Clark* F1073

8.860 Optical properties of thin films
Electronic properties of small silver particles: the optical constants and their temperature dependence U Kreibig F999
The optical absorption of evaporated beryllium films *O Hunderi and H P Myers* F1088
Frequency dependent conductivity of pure simple metals *W Jones* F1736

8.900 Electron and ion emission by liquids and solids and impact phenomena
Auger rates for soft x ray transition in ionic atomic and metallic lithium *D R Franceschetti and J D Dow* FL151
Characteristic energy losses in zinc and cadmium *P J K Paterson and R C G Leckey* FL156
A thermodynamical account of the photoemission spectra of the rare earths *B Johansson* FL169
Ultraviolet photoelectron study of Ag–Au alloys *A D McLachlen, J Liesegang, R C G Leckey and J G Jenkin* FL253
Oxidation effects on the spectrum of the slow SEE peak in polycrystalline Mg *B Wright and E B Pattinson* F176
Comparison between positron and electron emission from aluminium in the keV region *L Braicovich, A Fasana and G Gambarini* F792
Absorption and surface alloying of lead monolayers on (111) and (110) faces of gold *J Perderau, J P Biberian and G E Rhead* F798
Anomalous effects in the sputtered atom ejection pattern *R J MacDonald and I Reid* F1832
Photoelectric properties of evaporated Be films *T Gustafsson, G Broden and P-O Nilsson*

9.000 INTERDISCIPLINARY SUBJECTS

9.100 MATERIALS SCIENCE AND METALLURGY
Electronic properties of small silver particles: the optical constants and their temperature dependence *U Kreibig* F999
A Mössbauer study of iron precipitates in CuFe alloys *S J Campbell and P E Clark* F1073
